HERMES AGENT.

THE SELF-IMPROVING INTELLIGENCE PARADIGM.

Built by Nous Research, the lab behind Hermes, Nomos, and Psyche models.

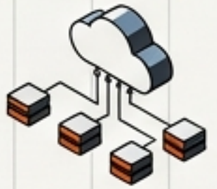

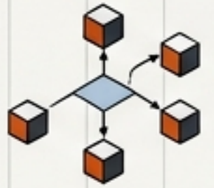

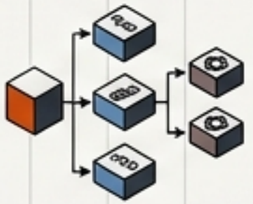

Hermes is Nous Research, the lab behind Hermes, Nomos, and Psyche models.

Hermes is not a coding copilot tethered to an IDE or a chatbot wrapper around a single API. It is an autonomous, omnipresent agent that creates skills from experience and gets more capable the longer it runs.

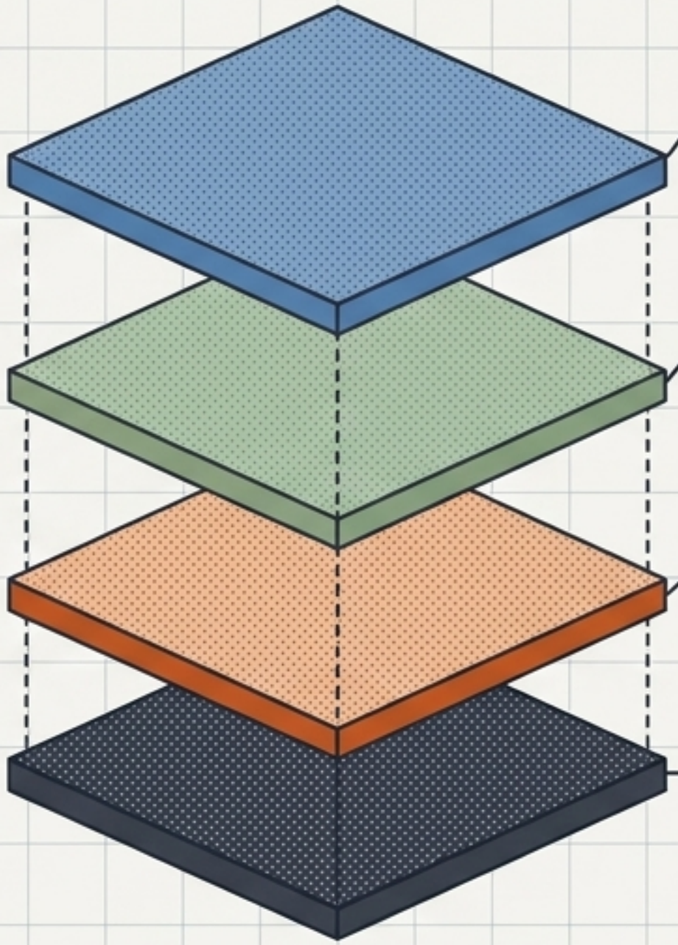

Gemini Notebook

The Architecture of Autonomy

	Traditional Copilots	Hermes Agent SUPERIOR ARCHITECTURE AUTONOMOUS ENGINE	
Operating Environment	Tethered to local laptops and specific IDEs.	Omnipresent. Runs on a $5 VPS, GPU clusters, or serverless infrastructure (Daytona, Modal).	
Memory & State	Amnesic. Context is wiped between sessions.	Persistent. Deepening cross-session dialectic user modeling via Honcho.	
Skill Expansion	Static. Requires developers to ship updates.	Generative. Autonomous skill creation and self-improvement during active use.	
Workflow Execution	Serial. Waits for manual human prompting.	Parallel. Delegates tasks to specialized subagents for simultaneous execution.	

Gemini Notebook

A Blueprint for Agentic Expansion

1. The Brain (Core): Closed Learning Loop, Honcho Memory, FTS5 Recall.

2. The Hands (Action): Open Standard Skills, 60+ Built-in Tools, Model Context Protocol (MCP).

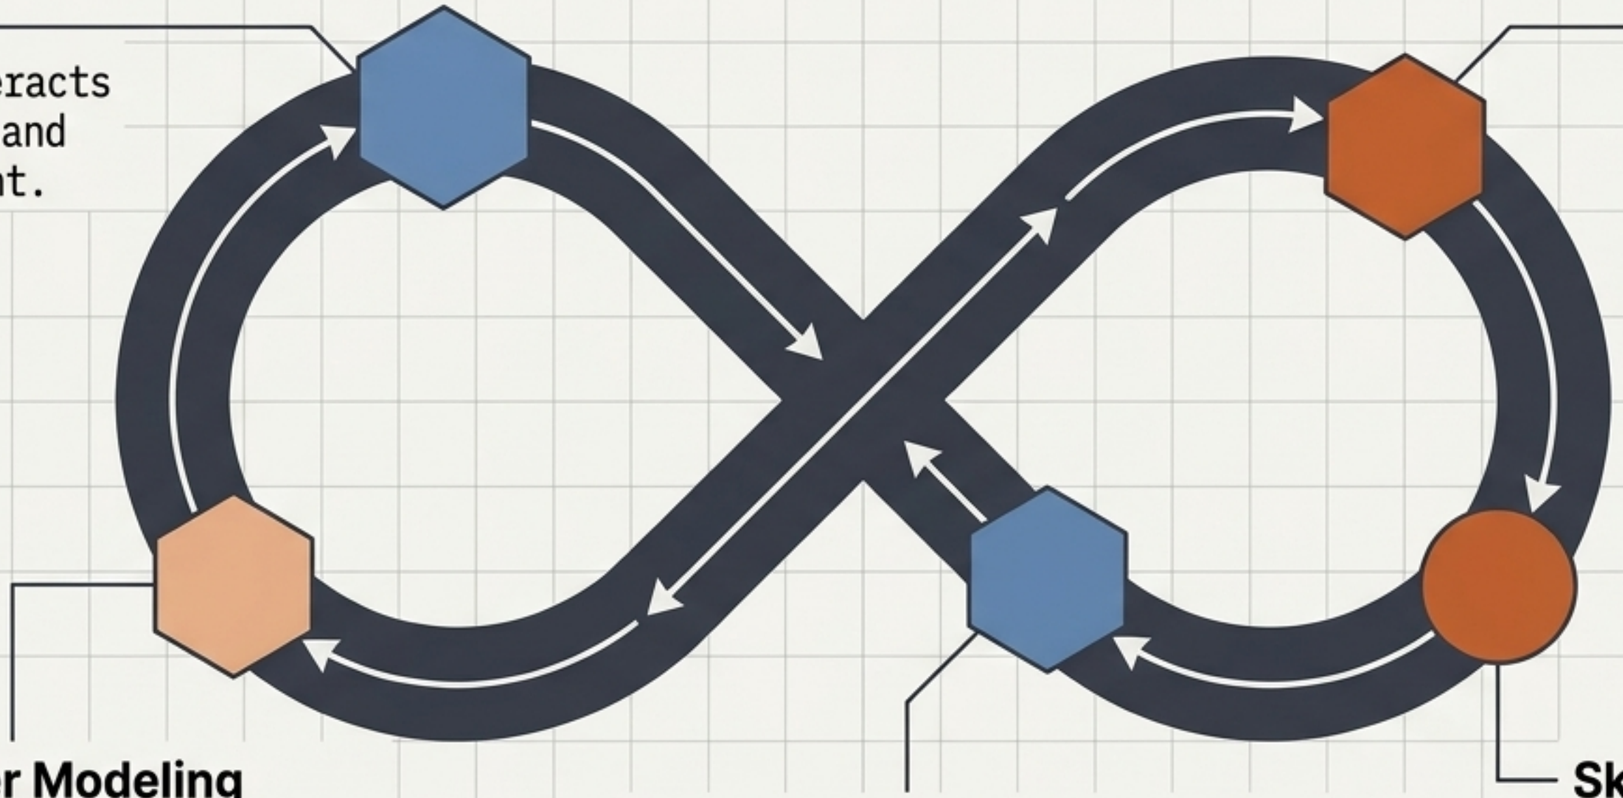

3. The Body (Environment): 7 Terminal Backends, Serverless Hibernation, Docker, WSL2.

4. The Voice (Interface): 20+ Messaging Platforms, Bot Mode, Voice Mode, Global SOUL.md.

Gemini Notebook

The Closed Learning Loop

Experience
The agent interacts with the user and the environment.

Autonomous Skill Creation
Hermes generates new procedural memory and tools on the fly based on recurring needs.

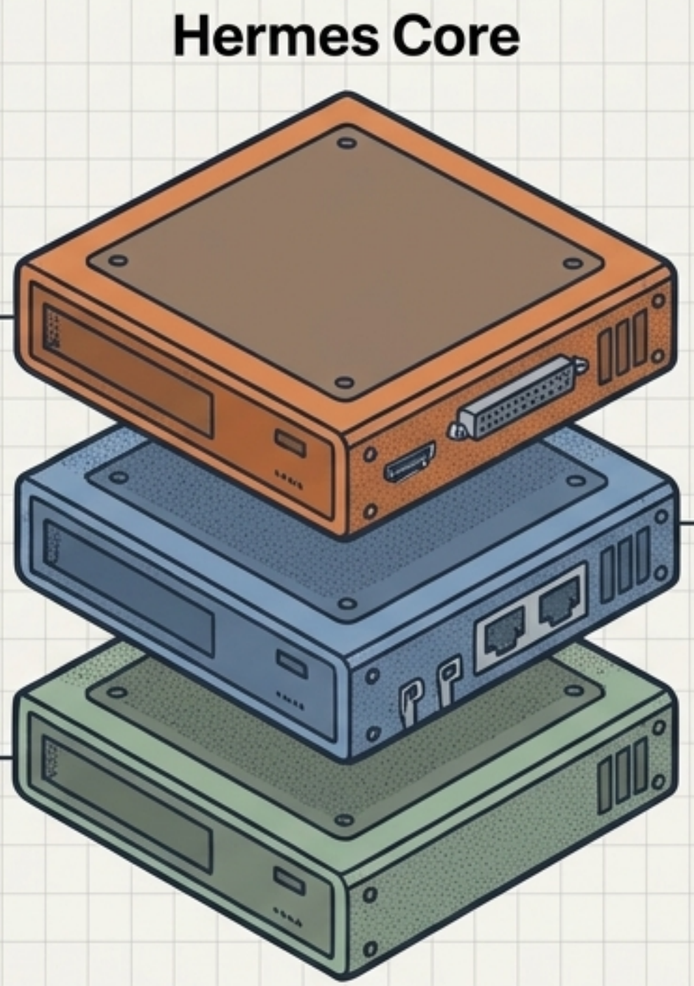

Dialectic User Modeling
Honcho integration continuously updates a deep, evolving model of the user's identity and preferences across sessions.

FTS5 Recall & Summarization
The agent nudges itself to persist critical knowledge, summarizing past contexts efficiently.

Skill Refinement
Tools are autonomously tested, debugged, and optimized during active use.

Gemini Notebook

Infinite **Extensibility** via The Skills Stack

Layer 3: Model Context Protocol (MCP)

Connect seamlessly to any MCP server, filter tools dynamically, and safely extend capabilities with enterprise or custom protocols.

Layer 1: 60+ Built-in Tools

Out-of-the-box readiness for system interaction and data processing.

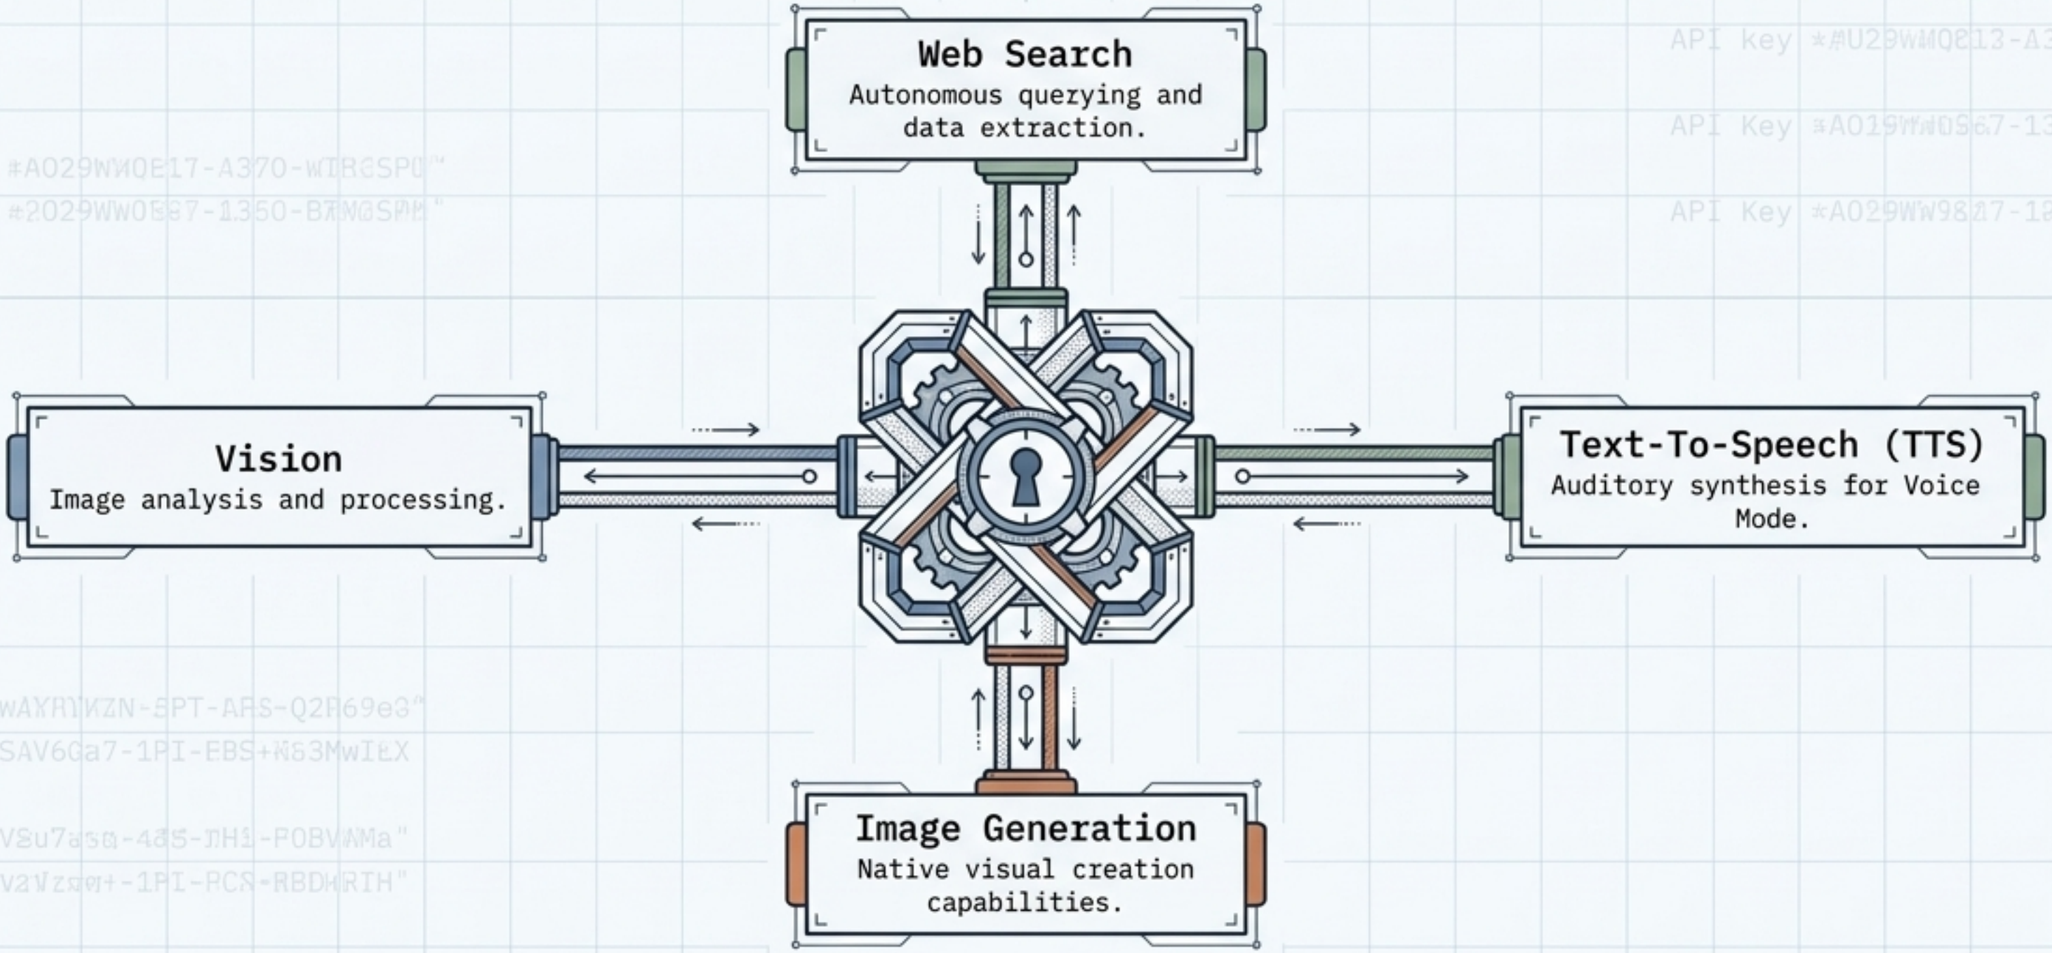

Layer 2: Open Standard Skills

Native compatibility with agentskills.io. Skills are highly portable, shareable, and community-contributed via the Skills Hub.

Gemini Notebook

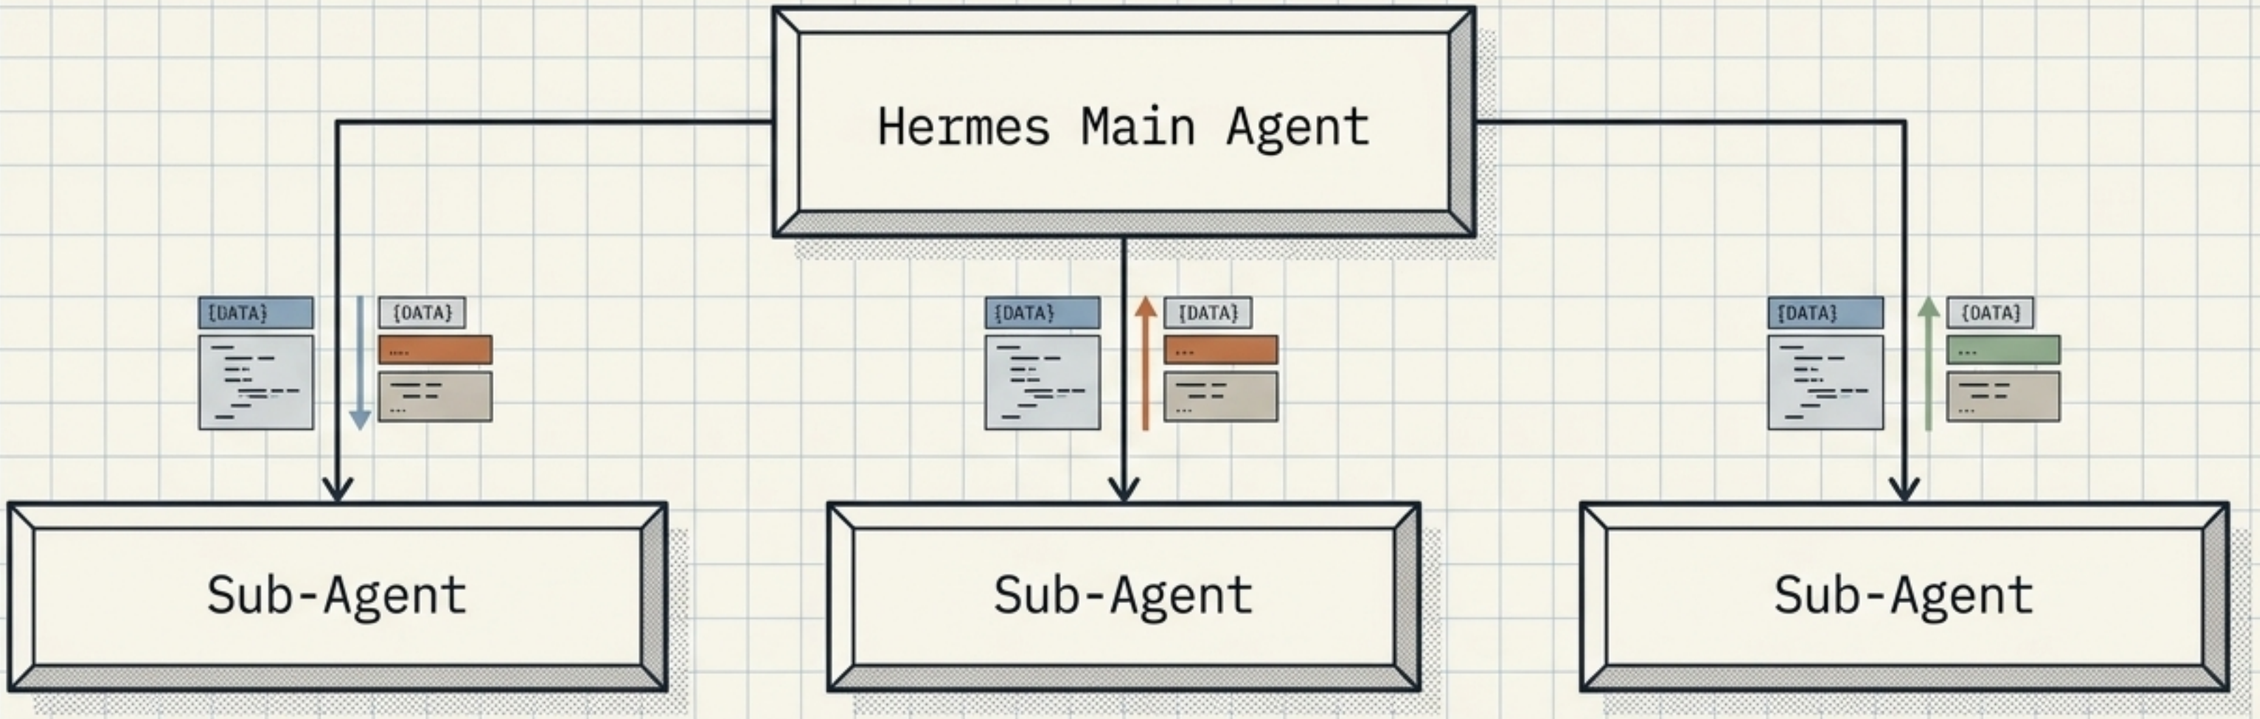

Unified Web Command

Zero-friction web capability. A single OAuth subscription via Nous Portal bundles all four Tool Gateway primitives under one unified access point.

Gemini Notebook

Bot Mode and Autonomous Delegation

Durable Specialist Teams

Build a roster of named Bots, each with isolated models, memory, skills, and routines.

Parallel Workstreams

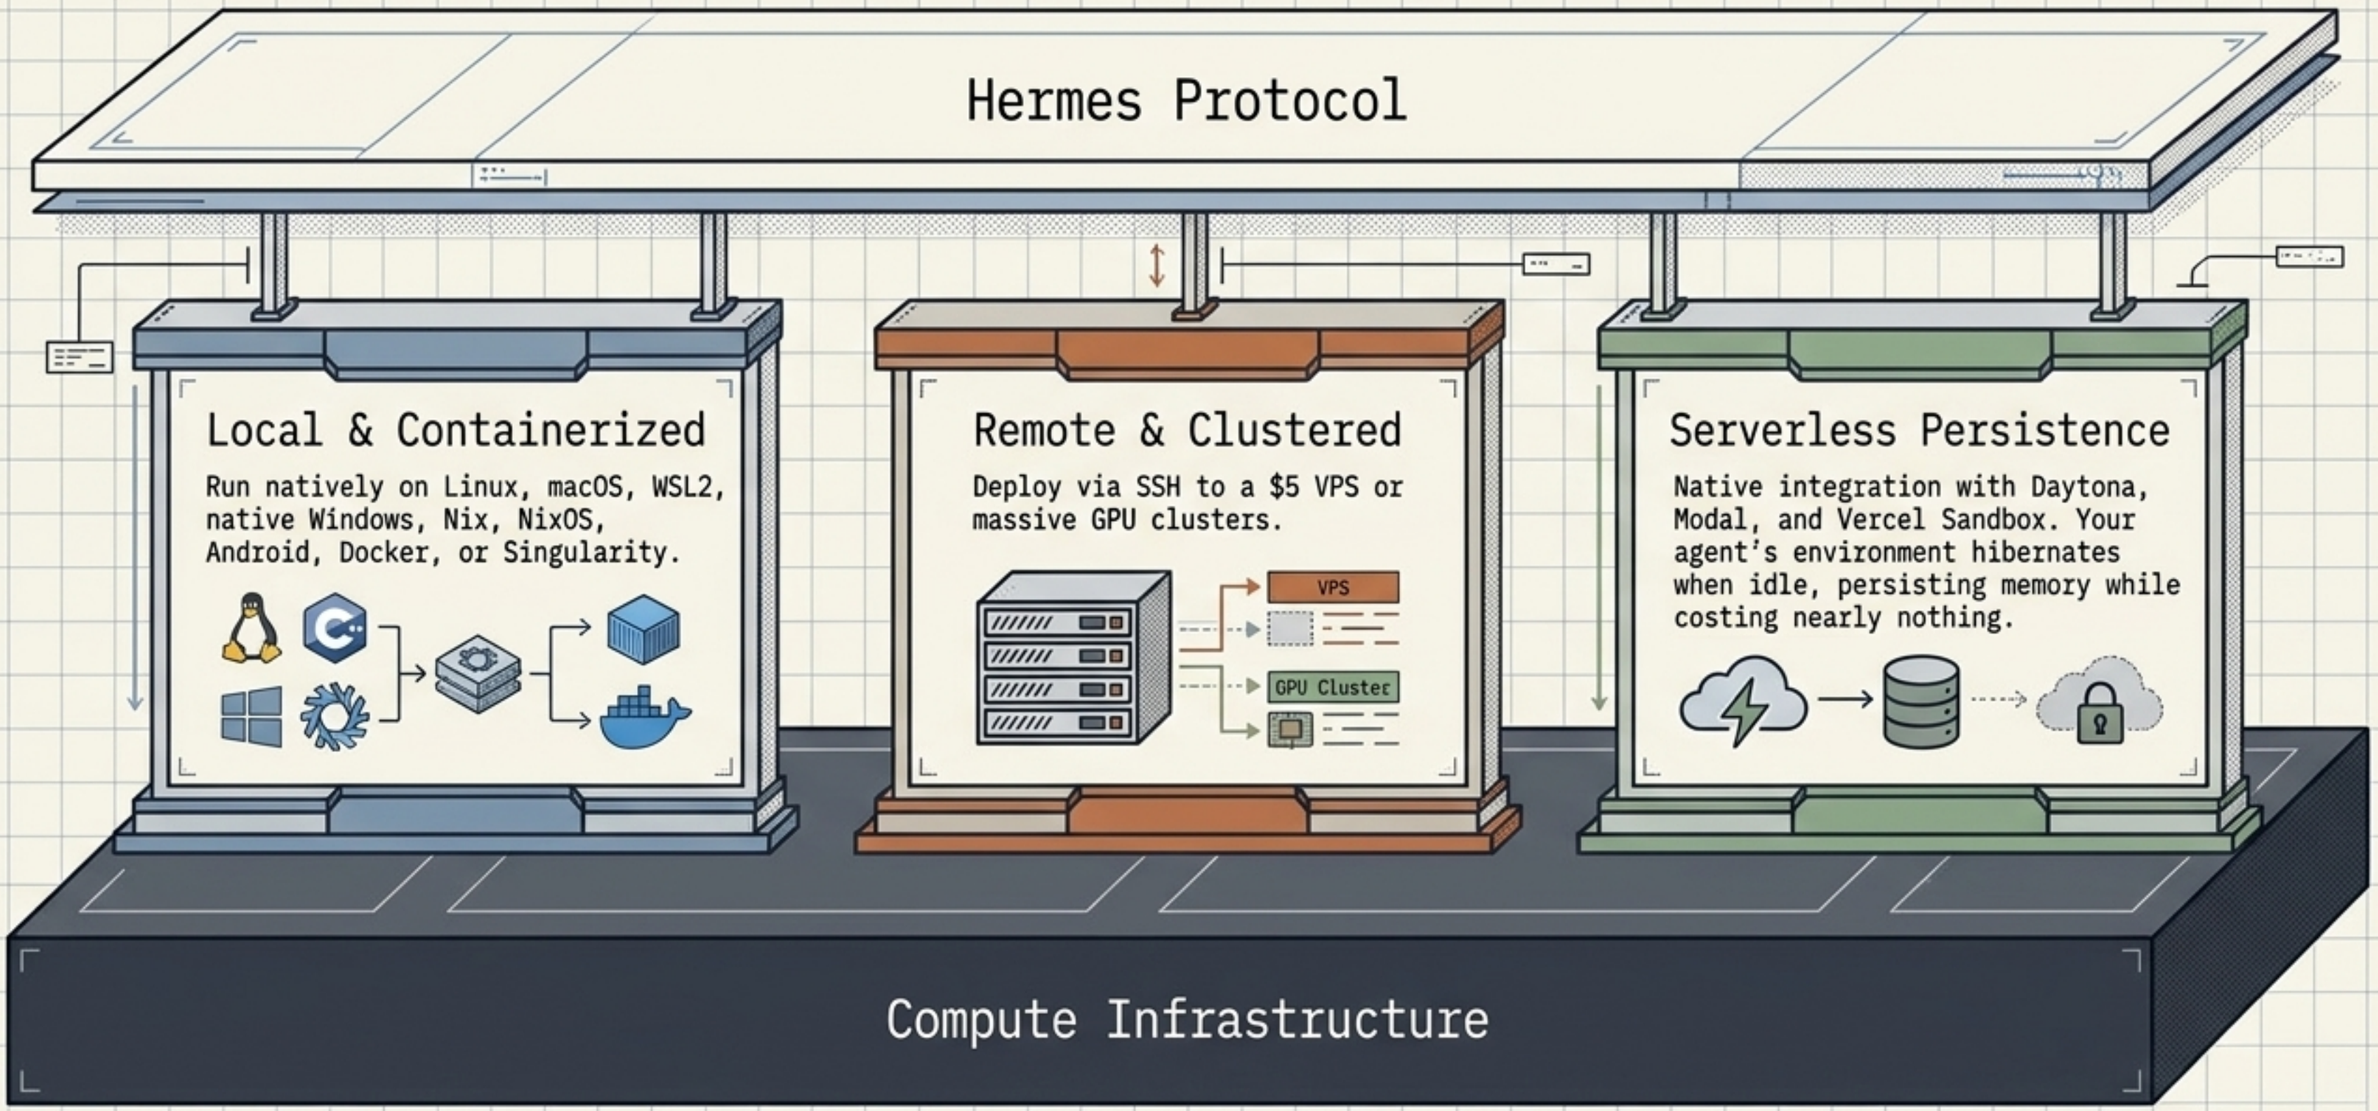

The primary agent spawns isolated subagents to execute concurrent tasks, seamlessly merging the outputs.

Programmatic Collapse

Programmatic Tool Calling via `execute_code` collapses complex, multi-step execution pipelines into single inference calls, drastically reducing latency and token cost.

Gemini Notebook

Omnipresent Deployment

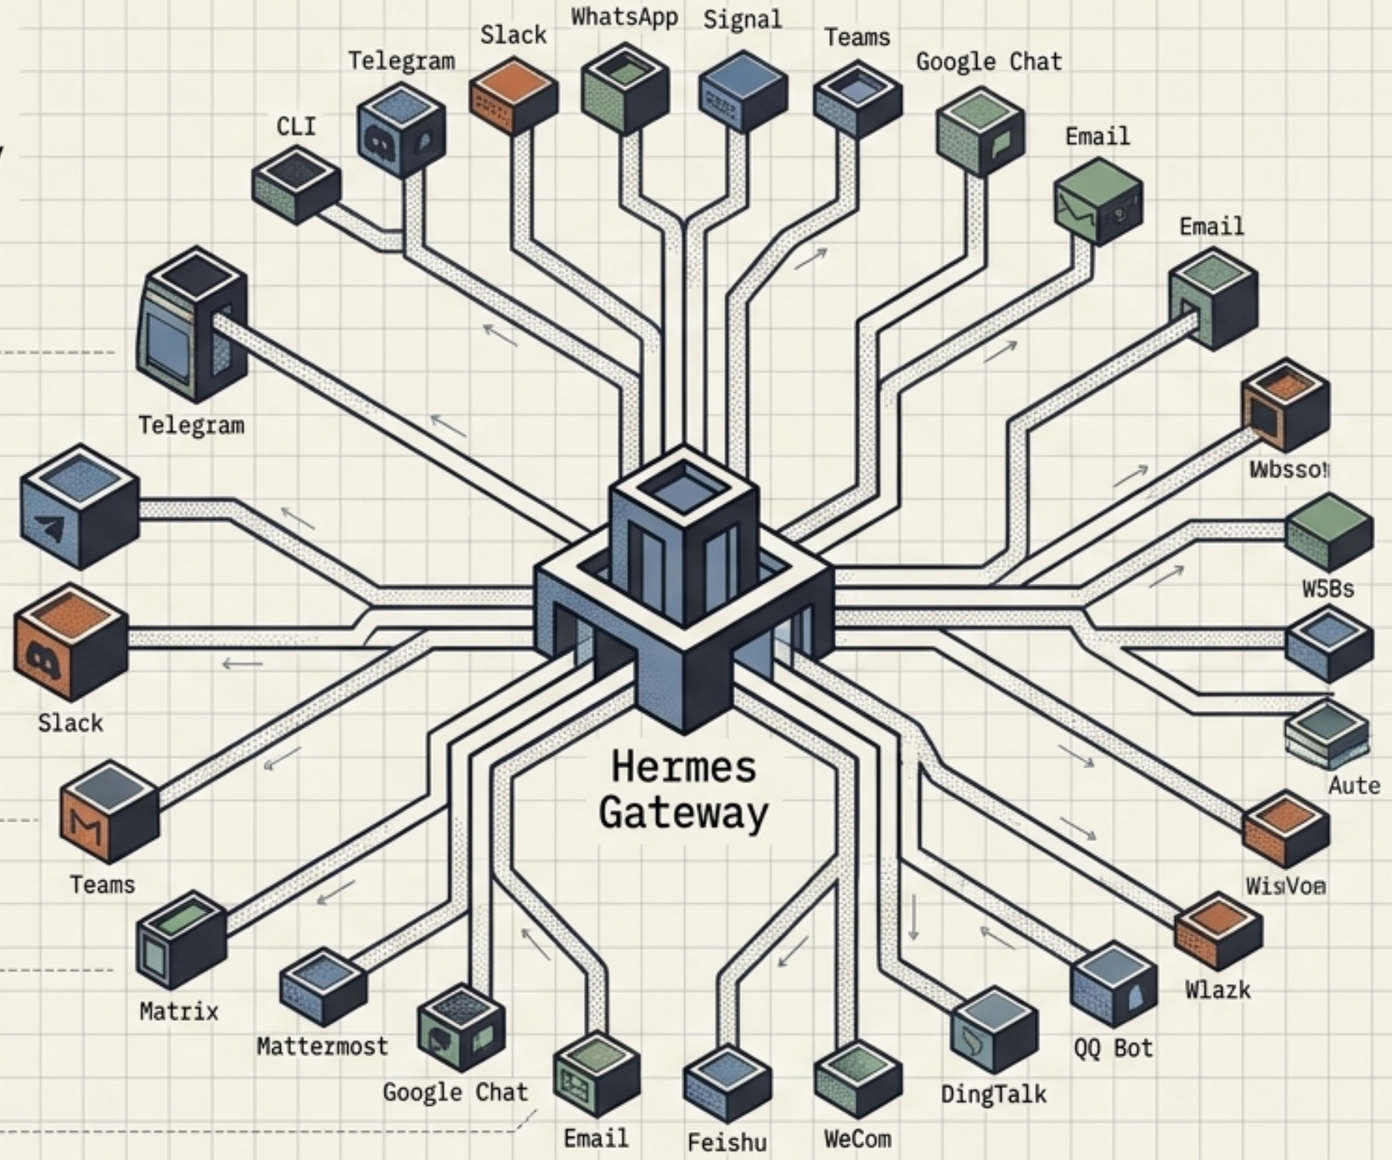

Gemini Notebook

The Universal Messaging Gateway

Talk to Hermes from Telegram while it works on a cloud VM you never SSH into yourself. Define Hermes' default voice and personality universally with a global SOUL.md.

- CLI & Voice Mode
  (Real-time voice in CLI and Discord VC)
- Telegram, Discord, Slack
- WhatsApp, Signal, SMS
- Teams, Google Chat, Email
- Matrix, Mattermost, Home Assistant
- DingTalk, Feishu, WeCom, QQ Bot

Gemini Notebook

Research-Ready Infrastructure

LLM-Native Documentation

Documentation is machine-readable. `llms.txt` (~17 KB index) and `llms-full.txt` (~1.8 MB full ingestion) generated fresh on every deploy for instant context loading.

Batch Processing

Run large-scale, automated evaluation evaluation pipelines effortlessly.

```
{
  "agent_id": "hermes-agent-001",
  "timestamp": "2024-10-27T14:30:00Z",
  "trajectory": [
    {
      "thought": "The user wants to optimize their database
  query. I need to identify slow queries first.",
      "action": "run_tool",
      "tool_name": "database_analyzer",
      "tool_args": { "mode": "slow_query_log", "limit": 10 }
    },
    {
      "observation": "Analyzer identified 3 queries exceeding
  500ms execution time. Suggesting index on 'user_id'.",
      "thought": "Okay, I will propose the index creation to
  the user."
    ],
    "status": "active"
}
```

Trajectory Export

Capture and export full conversation and thought trajectories for downstream analysis.

RL Integration

Native integration with `Atropos` for Reinforcement Learning training loops directly from agent interactions.

Gemini Notebook

Instantiate in 60 Seconds

Linux / macOS / WSL2

```
curl -fsSL https://hermes-agent.nousresearch.com/install.sh | bash
```

Windows Native Powershell

```
iex (irm https://hermes-agent.nousresearch.com/install.ps1)
```

Fastest path to a working agent: Run `hermes setup --portal` after install.

One OAuth covers your model and provisions all four Tool Gateway endpoints instantly.
